Parallax Thin

Parallax™ Thin ships already assembled with a thin-bezeled frame. The ambient light-rejecting technology features a micro-layered optical lens system that rejects light. This new technology mimics the look of a television when it is on and when it is off, but without the glare from windows or lighting fixtures.

With extremely wide viewing angles, no speckle and no glare, the surface is ideal for applications in Pro AV as well as Home Theater.

Each layer of Parallax plays a role in preserving the image that is reflected back to the viewer in high ambient light environments. Some layers absorb light while one special layer is shaped like a microscopic saw-tooth that blocks light from above resulting in the preservation of high-contrast, bright images in brightly lit environments.

Features

- Parallax 2.3 surface for standard throw projectors (1.8:1 throw or greater)
- Parallax 0.8 surface for standard throw projectors (1.5:1 or greater)
- Parallax UST 0.45 surface for ultra short-throw projectors (0.4:1 throw or less)
- See the Product Information sheet for projector placement.
- Thin 3/8" bezel aluminum frame
- 1" depth
- Ships fully assembled
- Compatible with the Chief XSM1U Wall Display Mount, XCM1U Single Pole Ceiling Mount and XCM7000 Dual Pole Ceiling Mount

Optional Accessories:

- Chief XSM1U Wall Display Mount
- Chief XCM1U Single Pole Ceiling Mount
- Chief XCM7000 Dual Pole Ceiling Mount

Available with the Following Screen Surfaces

Parallax 2.3
Horizontal Half Angle: 23º
Vertical Half Angle: 15º
Gain 2.3

Parallax 0.8
Horizontal Half Angle: 85º
Vertical Half Angle: 17º
Gain 0.8

Parallax UST 0.45
Horizontal Half Angle: 80º
Vertical Half Angle: 55º
Gain 0.45

Parallax UST 0.45 Projector Placement

The Ultra Short Throw projector must be mounted below the screen for the projected light to be reflected by the screen surface.

Parallax 2.3 and 0.8 Projector Placement

The examples below are for a ceiling mounted projector, but can be reversed for a table-top projector.

**Projector Distance**

- Parallax 2.3 requires a minimum Lens Throw Ratio of 181
- Parallax 0.8 requires a minimum Lens Throw Ratio of 151
- How to calculate Projection Distance (x):
  
  Projection Distance = Screen Width (viewable) x Lens Throw Ratio
  
  Example:
  
  180” projection distance ÷ 96” wide screen = 1.88 (188:1 Lens Throw Ratio)

- How to calculate Lens Throw Ratio:
  
  Lens Throw Ratio = Projection Distance ÷ Screen Width (viewable)
  
  Example:
  
  87” wide screen x 15 (Parallax 0.8 minimum lens throw ratio) = 130.5 (130.5” projection distance)

**Projection Angle**

- If the Projection Distance (x) is known, find the Maximum Vertical Offset:
  
  Maximum Vertical Offset (y) = 0.4 x Projection Distance (x)
  
  Example:
  
  Projection Distance (x) = 130.5”
  
  130.5” x 0.4 = 52.2”
  
  52.2” = Maximum Vertical Offset

- If the Vertical Offset (y) is known, find the Minimum Projection Distance:
  
  Minimum Projection Distance (x) = 2.5 x Vertical Offset (y)
  
  Example:
  
  87” wide screen with a 60” Vertical Offset (y)
  
  60” x 2.5 = 150”
  
  150” = Minimum Projection Distance
